## Introduction To Technology

Technology knows as the language of today's world. Technology offers a wide range in all places like Political, Entertainment, Business and even in agriculture. The impact of technology becomes larger and larger in modern world. This creates the new environment, new culture and new communication.

## Where Technology is used

Technology is used in every part of the world. Here is the main place where technology is widely used.

- (1) **Communication:** Most people use technology for communication with others. Smartphones, Internet and Telecommunications are the parts of this type.
- (2) **Information Technology:** Computers, Software and Cybersecurity are the most famous ones. This uses for storing and processing data and information, protect data or analysis data.
- (3) **Transportation:** Today vehicles are more modern and these doesn't even need a driver to drive. Automobiles, Public transportation and Aviation, GPS system, automation, radar system show the deep impact of technology in this part.

These are three places that technology is used more than other places- education, agriculture, military, science and entertainment.

## Gap Between Old Ages and Today

### Old Ages

In the past, communication was limited and to communicate with others, writing letters was used. This takes a lot of time to reach to another and slow information transfer because at that time animals are used as the vehicles. Moreover, the brain was also limited. There is only library to upgrade the knowledge and access to information was difficult. Everything was late and old-fashioned.

### Today

On the other hand, today, no one can survive without technology because everything is based on technology. In the past, meeting people from other side of the world is difficult. But now we can communicate or meet other from any part of the world easily without leaving any steps from the home. Modern transportation, for example, cars, planes, trains and ships are more upgrade and help the passengers to reach their destination in a short range of time. Without technology, the world will be still worse like old days.

### Conclusion

In conclusion, technology becomes vital to the human beings. This connected all people and offer opportunities and convenience. This not only develop the quality of life but also create new jobs and fields. As a technology improves, the best society will appear on the earth in the universe.
